

Issue related to Java

For 32 bit Internet Explorer, please [click here](#) to download and install Java software.
For 32 bit Mozilla Firefox, please [click here](#) to download and install Java software.
For 64 bit Internet Explorer, please [click here](#) to download and install Java software.
please note that here 32 bit and 64 bit represent version of browser.

In Mozilla Firefox (32 bit), if “a plugin is needed to display this content” error comes, then do following steps:

1. Open the browser. Type “about:config” in the address bar then a button will appear “Yes, I’m careful”. Click on it.
2. Search “javascript:enabled” in the search bar and make its value true.
3. Close the browser and restart the PC.
4. Open the experiment. Now when this message come “Activate Java” then click on it and then click on either "Allow button" or "Allow and Remember button".

Note: If "Activate Java" message do not come then click on plugin icon and then click on either "Allow button" or "Allow and Remember button".
